The inventions set forth in claims 1 to 4 involve an inventive step in relation to documents 1 and 2 cited in the international search report. Documents 1 and 2 do not disclose the technical feature of ensuring that the metal plating has a uniform height by growing the metal plating from the bottom parts of the plurality of openings and then allowing the metal plating to come into contact with the conductive film in order to decrease the growth rate of the plating, and it would not have been easy to conceive of the feature in question, even for a person skilled in the art.
